**Test Results:** Genotype of your dog is **CARRIER**.

**Risk for developing PRA:** This dog will never develop the prcd form of PRA (progressive rod-cone degeneration form of Progressive Retinal Atrophy).

DNA testing does not replace the value of routine eye exams.

**Significance for breeding:** Carrier dogs should be bred only to a mate of Normal/Clear genotype to avoid producing pups affected with the prcd form of PRA.

This interpretation is based on the test result of the DNA test for the specific mutation identified as causing the prcd form of PRA in Bouvier de l'Entlebuhs as of the date on this report.
